

Project Scope & Instructions
This UML establishes the skeletal structure and mandatory patterns. Students must:

1. Identify all required concrete classes from the Project Statement.
2. Correctly implement the defined inheritance, composition, and aggregation arcs.
3. You may add classes/relationships to this provided skeleton as needed for your specific mechanics, provided you can **justify these additions** during the demo.
4. 'A' means abstract class, 'C' means concrete class.
